CS 4/5789 23 Feb 2021 Prof sarah Dean Lecture 10: Model Based RL MDP model  $M = \{S, S_t, P, r, r, r\}$  infinite horizon tabular states actions transition remard discount without modern to discount distribution without the distribution of the finite horizon continuous. But now transitions/dynamics are unknown! 1) MBRL Algorithm with Query model The query model (also called generative model): For any s, a we can query the transition/dynamics model to sample the next state.  $s' \sim P(s, a)$  (equivalently,  $s' \sim f(s, a, w)$  st.  $w \sim D$ ) Black-box sampling access. Applicable to games + physics simulators.

Also simple, so it is a good starting point to understand sample complexity: How many samples are required for good performance? Alg: MBRL with Query model Sample  $s_i^* \sim P(s_i, a_i)$  and record  $(s_i^*, s_i, a_i)$ 2) Fit transition model  $\hat{P}$  from data  $\mathcal{E}(s_i^*, s_i, a_i)$   $\mathcal{E}(s_i^*, s_i, a_i)$ 1) For i=1,-, N: Today we will investigate the sample complexity of this method in two specific settings: tabular & LQR.

2) Tabular Setting Specialiting the organithm to this setting:

1) sample all (s, a) evenly: N sA times each 2) Fit transition model by counting  $\hat{P}(s'|s,a) = \sum_{i=1}^{N} \frac{1}{2} \sum_{i=1}^{N} \sum_{j=1}^{N} \frac{1}{2} \sum_{i=1}^{N} \frac{1}{2} \sum_{i=1}^{N} \frac{1}{2} \sum_{j=1}^{N} \frac{1}{2} \sum_{i=1}^{N} \frac{1}{2} \sum_{j=1}^{N} \frac{1}{2} \sum_{j=1}^{N} \frac{1}{2} \sum_{i=1}^{N} \frac{1}{2} \sum_{j=1}^{N} \frac{1}{2} \sum$ Zi=1 1 { Si=5 & ai=a} 3) Design ft with Policy Heration:  $\hat{\Pi} = PI(\hat{P}, r)$  $V^{T} = (I - 8P)^{T}R$   $Q^{Tt} = Policy Eval (ITt; P, P)$   $V^{T} = (I - 8P)^{T}R$   $Q^{Tt}(S,a) = V(S,a) + V(V(S'))$   $V^{T} = (I - 8P)^{T}R$   $V^{T} =$ Initialize To Goal: Compare performance of ITx Vs. IT strategy: 1) compare P vs. P 11) Translate Prs. P into difference between value functions 111) Translate difference in value functions 1) PVS. P: similar to last lectures discussion Lemma . with probability 1-8, for all s, a  $\leq |\widehat{P}(s'|s,\alpha) - P(s'|s,\alpha)| \leq \sqrt{\frac{s^2 A \log(2SA/8)}{k'}}$ 

Proof is out of scope

11) Value Functions: effect of model error Given a policy TT, what is the difference between the value Function defined by P compared to the value Function defined by B?

$$\sqrt{T}(S) = \mathbb{E}\left[\sum_{t=0}^{\infty} x^{t} r(S_{t}, \alpha_{t}) \Big|_{\substack{S_{0} = S \\ \alpha_{t} = \pi(S_{t})}}^{S_{0} = S}\right] \qquad \sqrt{T}(S) = \left[\sum_{t=0}^{\infty} x^{t} r(S_{t}, \alpha_{t}) \Big|_{\substack{S_{0} = S \\ \alpha_{t} = \pi(S_{t})}}^{S_{0} = S}\right]$$

Recall: Discounted State-action distribution  $d_{s_0}^{\mathsf{T}}(s,a) = (1-8) \overset{\approx}{\underset{t=0}{\sum}} 8^t P_t^{\mathsf{T}}(s,a;s_0)$ 

probability of visiting s,a at stept starting at initial state so

Simulation Lemma:  

$$\sqrt[3]{(S_0)} - \sqrt[3]{(S_0)} \le \frac{\sqrt[3]{3}}{(1-\sqrt[3]{3})} = \frac{\sqrt[3]{3}}{\sqrt[3]{3}} = \frac{\sqrt[3]{3}}{\sqrt[$$

Proof: First, we claim that  $\sqrt{T}(S_0) - \sqrt{T}(S_0) = 8 \mathbb{E} \left[ \mathbb{E}_{S_i \sim P(S_0, a_0)} \left[ \hat{V}^{\dagger}(S_i) \right] - \mathbb{E} \left[ \hat{V}^{\dagger}(S_i) \right] \right]$   $4 \times \mathbb{E} \left[ \hat{V}^{\dagger}(S_i) + V^{\dagger}(S_i) \right]$   $a_0 \sim T(S_0)$   $S_i \sim P(S_0, a_0)$ 

By iterating this expression K times,  $V^{\pi}(s_0) - V^{\pi}(s_0) = \sum_{k=1}^{K} x^{k} \mathbb{E} \left[ \mathbb{E} \left[ \hat{V}^{\pi}(s_k) \right] - \mathbb{E} \left[ \hat{V}^{\pi}(s_k) \right] \right]$   $+ x^{k} \mathbb{E} \left[ \hat{V}^{\pi}(s_k) - V^{\pi}(s_k) \right]$   $+ x^{k} \mathbb{E} \left[ \hat{V}^{\pi}(s_k) - V^{\pi}(s_k) \right]$ 

Letting 
$$k \to \infty$$
,  $\sqrt{T}(S_0) = \frac{1}{18} \sum_{S_0} \left[ \mathbb{E} \left( \sqrt{T}(S_0) \right) - \mathbb{E} \left( \sqrt{T}(S_0) \right) \right]$ 

$$\mathbb{E} \left( \sqrt{T}(S_0) - \mathbb{E} \left( \sqrt{T}(S_0) \right) \right) = \mathbb{E} \left( \mathbb{P} \left( S_0 | S_0 \right) - \mathbb{P} \left( S_0 | S_0 \right) \right)$$

$$\mathbb{E} \left( \sqrt{T}(S_0) \right) - \mathbb{E} \left( \sqrt{T}(S_0) \right) = \mathbb{E} \left( \mathbb{P} \left( S_0 | S_0 \right) - \mathbb{P} \left( S_0 | S_0 \right) \right) \right]$$

$$\mathbb{E} \left( \sqrt{T}(S_0) \right) - \mathbb{E} \left( \sqrt{T}(S_0) \right) = \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) = \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) + \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) \right]$$

$$\mathbb{E} \left( \sqrt{T}(S_0) - \mathbb{P} \left( S_0 \right) \right) = \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) + \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) + \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) \right) = \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) + \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) + \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) \right) = \mathbb{E} \left( \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) + \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) \right) = \mathbb{E} \left( \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) + \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) \right) = \mathbb{E} \left( \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) + \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) \right) = \mathbb{E} \left( \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) + \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) \right) = \mathbb{E} \left( \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) + \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) \right) = \mathbb{E} \left( \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) + \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) \right) = \mathbb{E} \left( \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) \right) = \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) = \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) = \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) = \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) = \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) = \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) = \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) = \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) = \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) = \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) = \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) = \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) = \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) = \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) = \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) = \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) = \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) = \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) = \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) = \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) = \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) = \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) = \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right) = \mathbb{E} \left( \mathbb{E} \left( S_0 | S_0 \right) \right$$

$$V^{*}(S_{0}) - V^{\widehat{\Pi}^{*}}(S_{0}) \leq V^{*}(S_{0}) - \hat{V}^{\widehat{\Pi}^{*}}(S_{0}) + \hat{V}^{\widehat{\Pi}^{*}}(S_{0}) - V^{\widehat{\Pi}^{*}}(S_{0})$$

$$\hat{\Pi}^{*} \text{ is optimal on } \hat{P} \text{ so } \hat{V}^{\widehat{\Pi}^{*}}(S_{0}) \Rightarrow \hat{V}^{\widehat{\Pi}}(S_{0}) \forall \pi.$$

$$(\text{Simulation}_{2x}) \leq \frac{Y}{(1-Y)^{2}} \left( \underbrace{\text{Ell} \hat{P}(\cdot | S_{1}a) - P(\cdot | S_{1}a)}_{S_{1}a \sim d_{0}^{\widehat{\Pi}^{*}}} + \underbrace{\text{Ell} \hat{P}(\cdot | S_{1}a) - P(\cdot | S_{1}a)}_{S_{1}a \sim d_{0}^{\widehat{\Pi}^{*}}} + \underbrace{\text{Ell} \hat{P}(\cdot | S_{1}a) - P(\cdot | S_{1}a)}_{S_{1}a \sim d_{0}^{\widehat{\Pi}^{*}}} + \underbrace{\text{Ell} \hat{P}(\cdot | S_{1}a) - P(\cdot | S_{1}a)}_{S_{1}a \sim d_{0}^{\widehat{\Pi}^{*}}} + \underbrace{\text{Ell} \hat{P}(\cdot | S_{1}a) - P(\cdot | S_{1}a)}_{S_{1}a \sim d_{0}^{\widehat{\Pi}^{*}}} + \underbrace{\text{Ell} \hat{P}(\cdot | S_{1}a) - P(\cdot | S_{1}a)}_{S_{1}a \sim d_{0}^{\widehat{\Pi}^{*}}} + \underbrace{\text{Ell} \hat{P}(\cdot | S_{1}a) - P(\cdot | S_{1}a)}_{S_{1}a \sim d_{0}^{\widehat{\Pi}^{*}}} + \underbrace{\text{Ell} \hat{P}(\cdot | S_{1}a) - P(\cdot | S_{1}a)}_{S_{1}a \sim d_{0}^{\widehat{\Pi}^{*}}} + \underbrace{\text{Ell} \hat{P}(\cdot | S_{1}a) - P(\cdot | S_{1}a)}_{S_{1}a \sim d_{0}^{\widehat{\Pi}^{*}}} + \underbrace{\text{Ell} \hat{P}(\cdot | S_{1}a) - P(\cdot | S_{1}a)}_{S_{1}a \sim d_{0}^{\widehat{\Pi}^{*}}} + \underbrace{\text{Ell} \hat{P}(\cdot | S_{1}a) - P(\cdot | S_{1}a)}_{S_{1}a \sim d_{0}^{\widehat{\Pi}^{*}}} + \underbrace{\text{Ell} \hat{P}(\cdot | S_{1}a) - P(\cdot | S_{1}a)}_{S_{1}a \sim d_{0}^{\widehat{\Pi}^{*}}} + \underbrace{\text{Ell} \hat{P}(\cdot | S_{1}a) - P(\cdot | S_{1}a)}_{S_{1}a \sim d_{0}^{\widehat{\Pi}^{*}}} + \underbrace{\text{Ell} \hat{P}(\cdot | S_{1}a) - P(\cdot | S_{1}a)}_{S_{1}a \sim d_{0}^{\widehat{\Pi}^{*}}} + \underbrace{\text{Ell} \hat{P}(\cdot | S_{1}a) - P(\cdot | S_{1}a)}_{S_{1}a \sim d_{0}^{\widehat{\Pi}^{*}}} + \underbrace{\text{Ell} \hat{P}(\cdot | S_{1}a) - P(\cdot | S_{1}a)}_{S_{1}a \sim d_{0}^{\widehat{\Pi}^{*}}} + \underbrace{\text{Ell} \hat{P}(\cdot | S_{1}a) - P(\cdot | S_{1}a)}_{S_{1}a \sim d_{0}^{\widehat{\Pi}^{*}}} + \underbrace{\text{Ell} \hat{P}(\cdot | S_{1}a) - P(\cdot | S_{1}a)}_{S_{1}a \sim d_{0}^{\widehat{\Pi}^{*}}} + \underbrace{\text{Ell} \hat{P}(\cdot | S_{1}a) - P(\cdot | S_{1}a)}_{S_{1}a \sim d_{0}^{\widehat{\Pi}^{*}}} + \underbrace{\text{Ell} \hat{P}(\cdot | S_{1}a) - P(\cdot | S_{1}a)}_{S_{1}a \sim d_{0}^{\widehat{\Pi}^{*}}} + \underbrace{\text{Ell} \hat{P}(\cdot | S_{1}a) - P(\cdot | S_{1}a)}_{S_{1}a \sim d_{0}^{\widehat{\Pi}^{*}}} + \underbrace{\text{Ell} \hat{P}(\cdot | S_{1}a) - P(\cdot | S_{1}a)}_{S_{1}a \sim d_{0}^{\widehat{\Pi}^{*}}} + \underbrace{\text{Ell} \hat{P}(\cdot | S_{1}a) - P(\cdot | S_{1}a)}_{S_{1}a \sim d_{0}^{\widehat{\Pi}^{*}}} + \underbrace{\text{Ell} \hat{P}(\cdot | S_{1}a) - P(\cdot | S_{1}a)}_{S_{1}a \sim d_{0}^{\widehat{\Pi}^{*}}} + \underbrace{\text{Ell} \hat{P}(\cdot | S_{1}a)}_{S_{1}a$$

$$(modul_{pound}) \leq (\frac{8}{-8})^2 \sqrt{\frac{5 \log(254/8)}{N}}$$
 W-p.  $1-8$ 

Theorem: (Sample (amplexity)

For 
$$0 \le S \le 1$$
,  $0 \le E \le 1 = 8$ , let  $N = \frac{4S^2 A \log(2SA)}{E^2(1-8)^4}$ 

Then with probability at least  $1-8$ ,

 $V^*(So) - V^{ff*}(So) \le E$ .

$$V^*(S_0) - V^{\widehat{H}^*(S_0)} \leq \varepsilon$$

3) LQR
MBRL in this setting: 1) generate 1id. samples Si~ N(0,021), ai~ N(0,021)
1) generate 110. samples $s_i$ solver $s_i$ of $s_i$ of $s_i$ estimate parameters by least squares  ( $\hat{A}$ , $\hat{B}$ ) = arg min $\sum_{i=1}^{N} (s_i' - As_i - Ba_i)^2$ 3) compute $K_* = LQR(\hat{A}, \hat{B}, Q, R)$
We won't derive results in detail for this setting. But at a high level,
1) parameter estimation
$\left  \left[ \frac{\hat{A} - A}{B} \right] \right _{2} \lesssim \sqrt{\frac{(n_{s} + n_{a}) \log(1/8)}{N}}$
matrix norm
11) Difference in value (1/2(s)=5/2s+R)
$\ P_{t}-\hat{P}_{t}\ _{2} \lesssim \ \hat{A}-A\ _{\hat{B}-B}$
111) Difference in performance $V_0^*(s_0) - V_0^*(s_0) \lesssim \ P_+ - \hat{P}_1\ _2 \lesssim \frac{(n_s + n_a) \log (V_8)}{N}$
$\widehat{V}_{o}^{*}(S_{0}) - V_{o}^{*}(S_{0}) \lesssim \ P_{+} - \widehat{P}_{b}\ _{2} \lesssim \sqrt{\frac{(N_{S}+N_{a})\log C_{s}}{N}}$
Sample complexity: E-optimal policy
after NIS (Mc+na)

after  $N \gtrsim \frac{(n_s + n_a)}{E^2}$  Samples
